- 04.03.2015 Wednesday (15.15h - 16.55h)

Description

Imint was founded in 2007, based on advanced research at Uppsala University, Center for Image Analysis on real-time video analytics and enhancements. Initially, the company focused on enhancing live aerial surveillance video streams in the defense domain, by removing obstacles for human perception caused by disturbances, such as uncontrollable movements, vibration and turbulence. Imint is the proprietor of the Vidhance technology, optimized and patented software for live video quality improvements. Today, Imint serves a broad range of customers in a variety of fields, enhancing visibility and improving viewing quality from live video from cameras in motion. Imint has also retargeted its technology to remove the quality degradation of handheld mobile video capture in the product platform Vidhance Mobile. Vidhance Mobile is a patented, real-time, purpose-built all-software video stabilization solution, with minimal latency and low processor requirements, derived from Imint's defense targeted video analytics, enhancement and optimization software. Existing stabilization solutions in most leading smartphones utilize digital, electronic, and/or optical image stabilization (DS, EIS and OIS) and solve for image stabilization, not video stabilization. As tests with premium smartphone brands have shown, current solutions only address certain high-frequency shakiness - they do not solve for the full range of distortions that prevents achieving truly stabilized, high quality video.
