- 04.03.2015 Wednesday (11.05h - 13.10h)

Description

DSD System provides a Computerized Maintenance Management Software (CMMS) named ALTAIR ENTERPRISE. We provide also support for the installation of the software in all industries, as well as technical assistance. ALTAIR ENTERPRISE is a web-enabled CMMS solution with ten years of development behind it. From the outset, our aim has been to offer a CMMS with rich functionality that is both intuitive and user friendly.

Our Computerized Maintenance Management System Software allows our clients to :

- Manage preventive and curative maintenance
- Manage spare parts
- Manage subcontractors
- Improve the effectiveness of maintenance operations.
- Significantly reduce administration.
- Adhere closely to guidelines and performance indicators.
- Centralize documents, regulations and procedures.
- Manage inventory, purchasing and traceability in real time.
- Manage staff through integrated planning.

Altair is a web-enabled CMMS solution with ten years of development behind it. From the outset, our aim has been to offer a CMMS with rich functionality that is both intuitive and user friendly.

Key features of the Altair CMMS Multi-site management Altair can be tailored to suit all sizes of business in any sector. Several sites can be managed at once, whether in co-ordination or separately.

Preventive maintenance

Preventative maintenance involves organization, planning and automation. Our preventative maintenance tools include:

• Planned maintenance • Triggered maintenance • Planned maintenance sheets • Measurement points • Equipment inspections • Operational activities • Shutdowns planning and management • Costs planning

Corrective Maintenance

Corrective maintenance requires a high level of responsiveness and rapid access to information: • Work requests • Work orders • Parts records • Technical and workforce data • Staff records • Work order planning • Workforce potential management

Purchasing/Inventory

In order to avoid stock outages and to prevent any delays, the CMMS includes a complete purchasing and inventory management module: • Spare parts • Multi-store options • Multi-supplier • Purchase requests • Price requests • Thresholds • Automatic replenishment • Purchasing of parts and services • Contracts • Billing

Tree diagrams

Using our tree diagram tool will help you locate all the useful information held on the Altair CMMS server: • Multi-site/facilities • Equipment and location • Unlimited levels • Mapping systems • Technical models • Document library • Regulations

HSE: Health, Safety, Environment

For many sites, the management of health, safety and the environment is essential. Altair Enterprise allows you to manage: • Activities relating to health, safety, quality and environment • HSE event management • Risk management • Audits management • Audit reports • Authorization • Formation triggering • Checklists • Feedbacks • Regulations • Compliance of equipment monitoring • Compliance work orders

Customer management/after sales service

In order to facilitate the management of customers and service, the Altair CMMS provides everything you need for complete control: • Customer portfolios • Work request processing • Preventive maintenance management • Monitoring of maintenance activities • Billing • Maintenance contracts • Planning and allocation

Expenditure management

With effective expenditures monitoring and analysis tools, Altair Enterprise provides all the information you need for maintenance budget optimization • Account assignment • Budgets settings • Expenditure monitoring and analysis • Subcontracts monitoring and management • Billing • Maintenance contracts • Accounting interfaces for ERPs

Reporting

In order to conduct analysis and to have an overall view of maintenance operations, the Altair CMMS provides an entire system of reporting: • FMEA (Failure Mode and Effects Analysis) • Cost analysis • Maintenance dashboard • Purchasing and inventory dashboard • Real time and historical measurements CMMS administration and customization

The CMMS administrator can access a management interface to configure user profiles and access rights as well as many other settings of the interface and functionality. The software can be customized according to the business sector and needs of each user, in order to make the maintenance service as effective as possible.
