- 04.03.2015 Wednesday (11.05h - 13.10h)

Description

Negentis, named by Gartner as Cool Vendor 2014, produces a very innovative Internet of Everything (IoE) software platform which empowers customers to design, deploy and manage the entire life-cycle of IoE applications in the Industrial Internet and Digital Business ecosystems. Negentis IoE platform seamlessly connects people, machines, data and applications blending Edge and Cloud computing throughout the entire IoE application stack. The platform is very modular and combines several capabilities including enterprise service bus, process integration and development, enterprise content management, business activity monitoring, advanced real-time analytics and also a carrier-grade billing module that supports flexible platform tariffing for a full-scale PaaS business model implementation. Its use in several industry application domains drastically reduces down-times, increases productivity, optimises operations efficiency and costs, and enables the development of new business models. Negentis IoE platform features a unique deploy strategy; due to its light software footprint, it can be deployed not only in conventional cloud-based centralised architectures but also in truly distributed system implementations, where computational intelligence is built natively into edge network nodes. Negentis' IoE platform prospective end-users are all enterprises where integrating people, machines, business and operational processes, data and documents, is central for the value-generation process
