Description

Tellu is working in the Internet of Things (IoT) space focusing on services for Healthcare, Home Care, Personal safety in the Smart City context. Tellu specialises in services and technologies using mobile platforms, state of the art cloud computing harvesting data from devices and sensors connected to the internet or within your organisation. Location based services are critical and specially real time Indoor Locations is one of the strong points in the Tellu SmartPlatform™ .

Tellu SmartPlatform™ connect your devices, sensors to your processes and provides them real-time visibility on your terminals. Tellu SmartTracker also enriches the information with context relevant information from other resources available on internet or in your own business systems and CRM.

Tellu powers your real time Operations and provide you with Operational Intelligence

Offer

Tellu SmartPlatform for Healthcare and Personal Safety

Tellu offers a software platform in the cloud enabling and powering Smart Products and Smart Services. Current solutions offered are within Healthcare, Telehealth and personal safety/duress and alarm management.

With Tellu SmartPlatform you can connect devices and sensors to the internet to create real time operation and visibility of your business. You can enable new services and reform and enhance existing services. There are already comprehensive libraries of devices, device clouds and business logic available. There is also end-user development templates to be used.

We offer free access to our developer zone for partners who wish to create solutions using the Tellu SmartPlatform. The same goes for Partners who want to resell already existing solutions within healthcare, homecare and personal safety to their customers or market.

If you have products or services you would like to make "Smart" connecting them to Internet, or you are seeking Internet of Things development platform, we would like to talk to you.

If you have devices or sensors you would like to build into a context using Internet of Things, we would like to talk to you.
