- 03.03.2015 Tuesday (15.15h - 16.55h)

Description

Gloin was founded in March 2010 with the aim of providing innovative solutions in the field of software projects based on the most advanced techniques. Our distinctive values: serious work, high quality in everything we do and absolute dedication to the customer. We like our projects to generate exclusive solutions conceived as the finest handmade products. Since then, we have collaborated with several companies in fields such as process automation, quality in large data sets and cloud and mobile solutions to improve customers experiences and relationships. Despite being a small young startup company, Gloin has earned international recognition. Our innovative envisioning allowed us to win competitions like the Launchpad Denmark Bussiness Plan Cup in 2013.

Request

Mobile Marketing Technical, Research and Sales/Distribution co-operations

We are software and mobile applications developers specialized in mobile push notifications as mobile marketing tool.

We are looking for technical and sales/distribution co-operation with mobile developers and marketing agencies interested on offering mobile marketing solutions based on targeting and user segmentation provided by our push notification platform, offering it as part of their products and services catalog.

We are also interested in co-operating with research works and existing technologies related with user's profiles extraction based on mobile usage patterns and social interactions, to extend our technical capabilities and apply them in the mobile marketing field.

Cooperation Offered

1. Outsourcing co-operation
2. Technical co-operation

Cooperation Requested

1. Technical co-operation
2. Sales / Distribution

Offer

Mobile & Software technical/outsourcing co-operation

We offer technical and outsourcing co-operation in software and mobile development.

We have developed a push notification platform (nimbees.com) that provides advanced targeting capabilities based on geolocation and users' profile extracted from their mobile usage patterns. User's privacy is granted by keeping the inferred information only in the mobile.

Its capabilities include outdoor geolocation, indoor iBeacons support, and an API to integrate the platform with any system.

We offer technical co-operation for the integration of our platform as a complementary product/service for mobile marketing agencies or mobile developers, and adapting our solution to fit specific customer requirements.
