Areas of Activities

SOFTWARE/INTERNET

1. Application development

Offer

Solutions for real-time collaboration

we have developed an app that allows users to collaborate in real-time on a mobile device - grab a doc/ppt/pdf/images and share it with others -as you scroll, pinch, zoom and edit, they follow along. Others users can also scroll and edit the doc in real-time in its original format. Multi-user chat, video and voice calls are integrated into the collaboration.
