Description

Put your eyes wherever you need quickly and easily. StreamGPS is a cloud platform that enables you to broadcast live geopositioned video from multiple mobile devices to perform control tasks, surveillance and broadcasting. This can be done from apps on smartphones, wearables (vests) or autonomous cameras broadcasting via 3G/4G/wifi without complex and expensive configurations or fixed installations with total privacy. StreamGPS helps reduce costs and increase flexibility in remote maintenance, surveillance or broadcast sporting events, allowing control up to 200 points simultaneously, receiving alerts based in video detection and gps traceability.

Request

Agreements in distribution, manufacturing and Investment

StreamGPS is launching new products and solutions and wants to find companies and partners with common interests in real-time video surveillance, streaming, broadcasting and wearables. We are searching for manufacturers,

distributors, potential clients, solution partners and investors interested in 2015 trends in real-time video appliances and wearable devices.
