EKONET - AIR POLLUTION MONITORING

ekoNET service is designed to provide a complete end-to-end solution for the environment monitoring following the concepts used within the IoT (Internet of Things) domain. The system comprises all necessary components, namely: measuring device (EB800 and/or RPi800), back-end infrastructure (i.e. cloud server) and client applications (web and mobile).

System enables monitoring of the following air condition parameters: CO, CO_2, NO, NO_2, SO_2, O_3, PM, air pressure, temperature and humidity.

AR GENIE - AUGMENTED REALITY CREATOR PLATFORM

The AR Genie platform aims to dramatically simplify development and deployment of Augmented Reality (AR) applications by utilizing pre-defined templates, components and modules enabling creation of cross-platform applications with no programming skills and effort required.

Use the platform to create your own custom AR applications using the pre-defined templates:

- Take a photo - scan any image and take the photo with AR content which can be 2D or 3D content (famous person, animated 3D model etc.). This can be used to promote a certain product, event, company etc. Share the photo via email, Facebook or other social media

- Create your own Treasure Hunt game - define sequence of markers and associated clues to create engaging game for your friends, company or general public. Play indoor or outdoor

- Send a postcard or birthday card via email, Facebook or by post. Define your own content to be shown when postcard is scanned
